### **Chemical Spill Report**

Date of spill: March 12, 2014

Time of spill: 6:55 am

Location of spill: Explosives Complex

Estimated amount of spill (gallons): 70 gallons

Type of material spilled: Diesel

Date of Chemical Spill Report: March 12, 2014

Existing Weather conditions: Cold (20 °F) & Breeze

Reported by: Dave Kid

Reported to (persons and/or agencies): Utah DEQ & Simplot Headquarters  
Incident # 11756

Other Persons Present: Brad Davidson (Blasters)

Description and cause of spill: Unit 1843 bulk truck was parked for the night in the explosives complex. Sometime during the night the check valve on the diesel pump failed allowing the diesel to slowly leak from a 600 gallon tank. When it was discovered in the morning the emergency fuel shut off was switched for prevent further leaks. When the tank was filled it was estimated that 70 gals had spilled.

Cleanup and control action taken: The valve to the diesel line was turned off to prevent further leaks when it was discovered and the appropriate calls were made. The explosives complex is self-contained with earthen berms

Effectiveness of cleanup operations: A backhoe was used to scrape up the spilled diesel and soil. This is very effective as there is no evidence to be seen that the spill occurred.
